

MOUNTAIN BIKE, PRÊLES

PUMPTRACK PLATEAU DE DIESSE

The pumptrack is a closed loop course, made up of several consecutive bumps and raised turns which can be practiced with various rolling machines (bicycles, scooters, skateboards, roller skates). The relief of the track allows you to move forward without pedaling or pushing, but simply by "pumping" (hence the English term "pump" and "track"). It is enough to play with the weight of its body in a way synchronized with the relief of the track to generate speed.

The Pumptrack Plateau de Diesse has a surface of 1000 m². Asphalted, built in 2021 by the world leader Velosolutions, it includes a main track, a beginners track and a double bowl. Right next to it is a picnic area with 2 tables and a bike park. Also available is a Bike Tools Board for repairs. Toilets are available (with first aid kit).
