

GUIDED CITY TOUR, MONT-SOLEIL

THE SUN, SOURCE OF ENERGY

This combined tour of the astronomical observatory and the solar and wind power plants offers a unique way to discover the Sun from both an astronomical and a renewable energy perspective. The visit starts at the observatory, where the characteristics of the Sun are explained. Each participant has the opportunity to safely observe the star through a dedicated solar telescope.

The tour continues inside a wind turbine and through a solar panel field, highlighting the essential role of the Sun in renewable energy production – whether solar or wind.
