

MUSEUM, NEUCHÂTEL

ESPACETEMPS

"It's half past noon at the Neuchâtel Chronometric Observatory"! This mythical place has been for years the reference in terms of exact time. Both an astronomical and a chronometric observatory, the magnificent Hirsch Pavilion with its Art Nouveau decor contains some iconic pieces, including the famous Zeiss telescope from 1912 and a seismograph from the 1930s. A place that is both historical and scientific to discover on the heights of the city.
